

Serena Sharar

Mind, Body, Spirit Collage

Spring 2023

ART2602C Intro to Digital Media

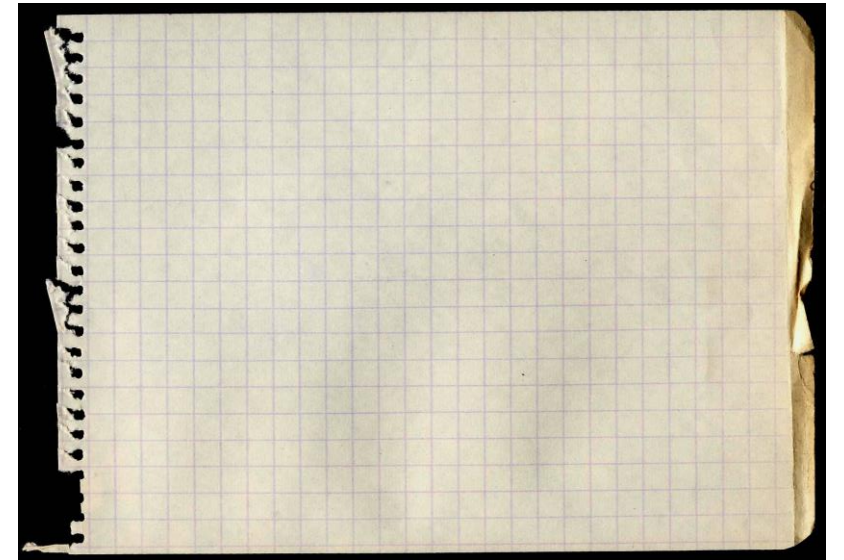

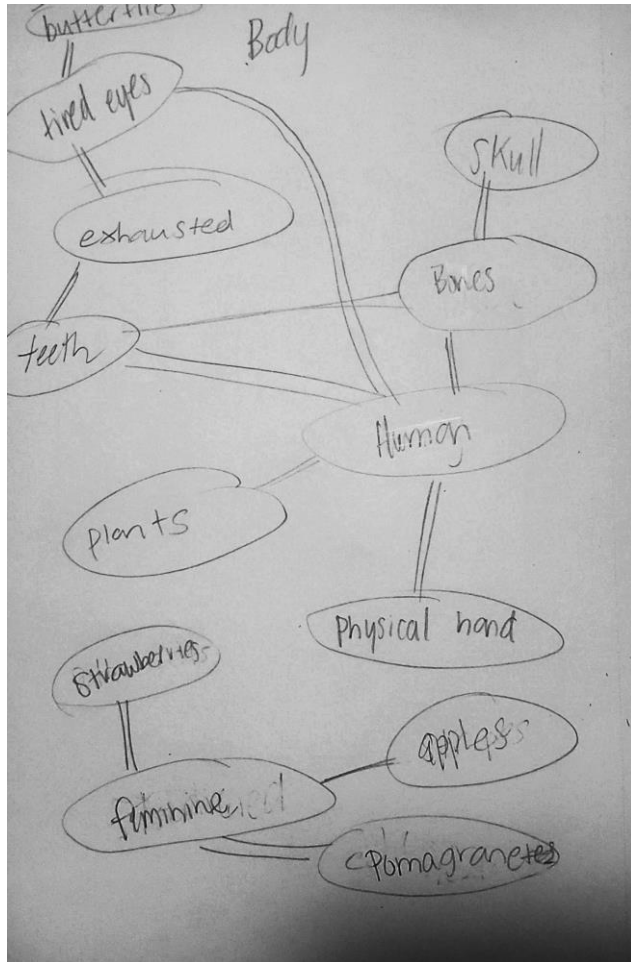

# Mind

- Foggy
- Sensible
- Artistic
- Creative

For mind I wanted to contrast the “right brain” and “left brain.” Sensible rigid lines contrasting fluidness of ink spots.

# Mind

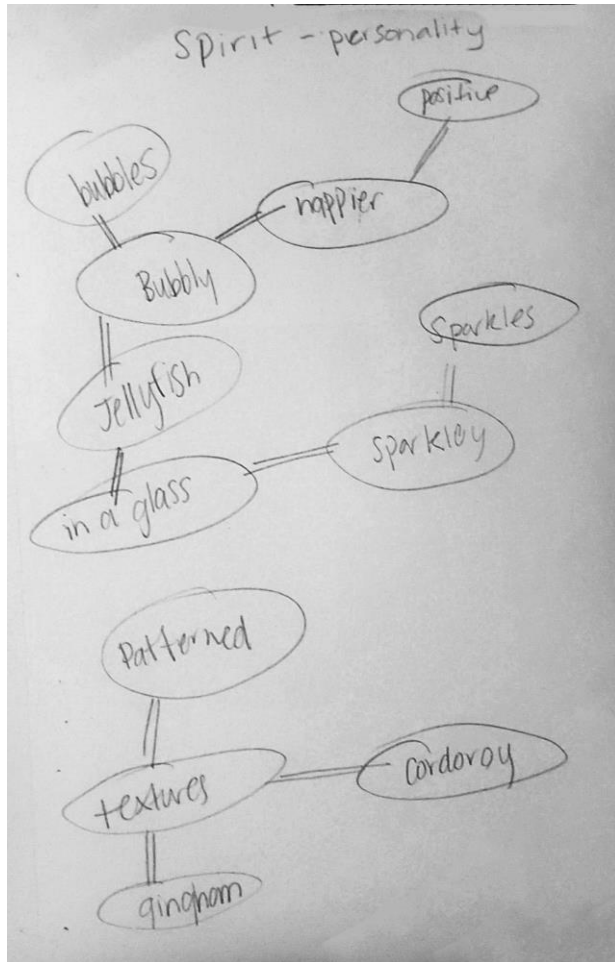

# Body

- Exhausted
- Human
- Feminine
- Temporary

For body, I kept it simple for the word list. I wanted this topic to be literally bare “bones.” The feminine aspect came later in the brainstorming process but is a such an important part of my bodily experience. Ill be tying in the fruit to symbolize that.

# Body

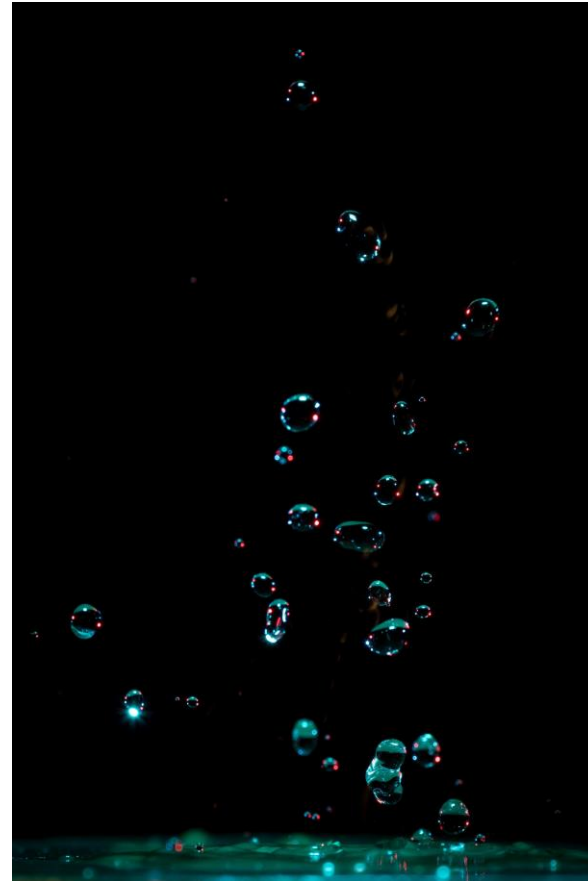

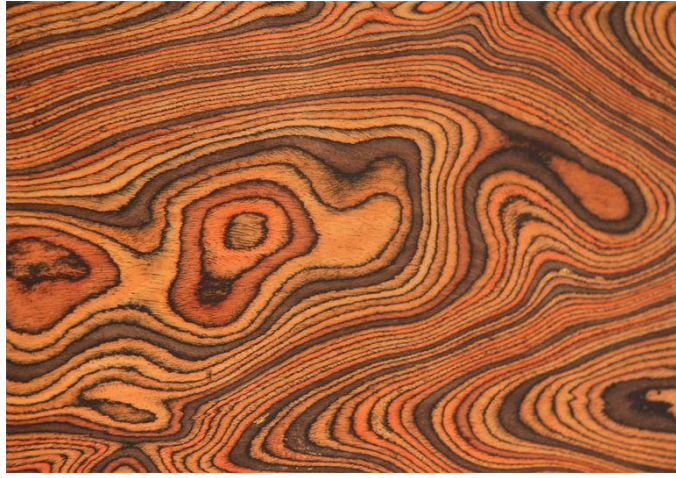

# Spirit

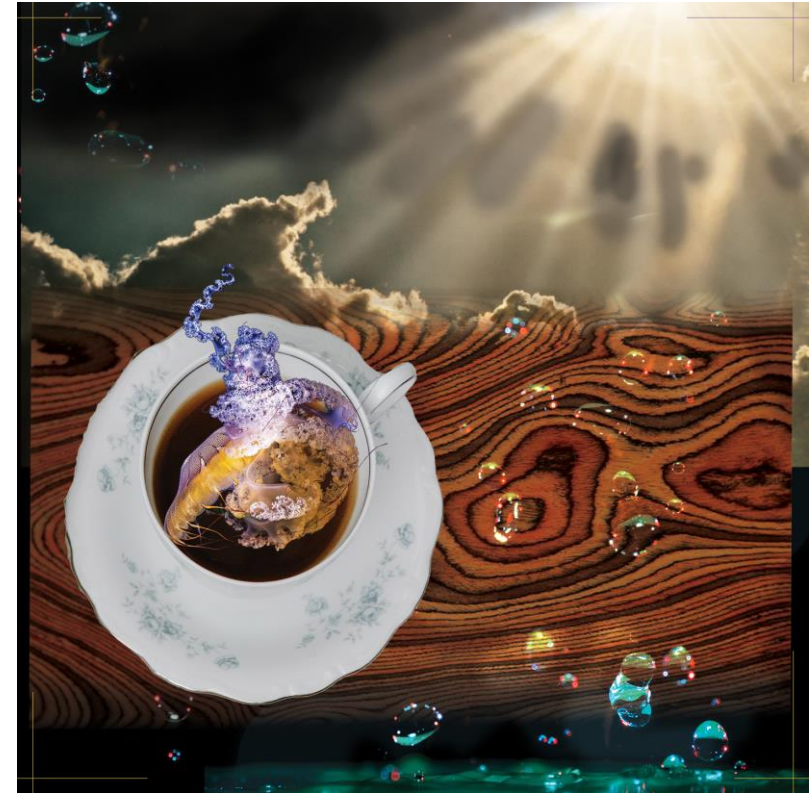

- Bubbly
- Sparkling
- Patterned
- Happy
- Whimsical

This is where I established my main plan for this project. I want to make desks that, if personified, each part of myself would have. How each category would live and work.

# Spirit

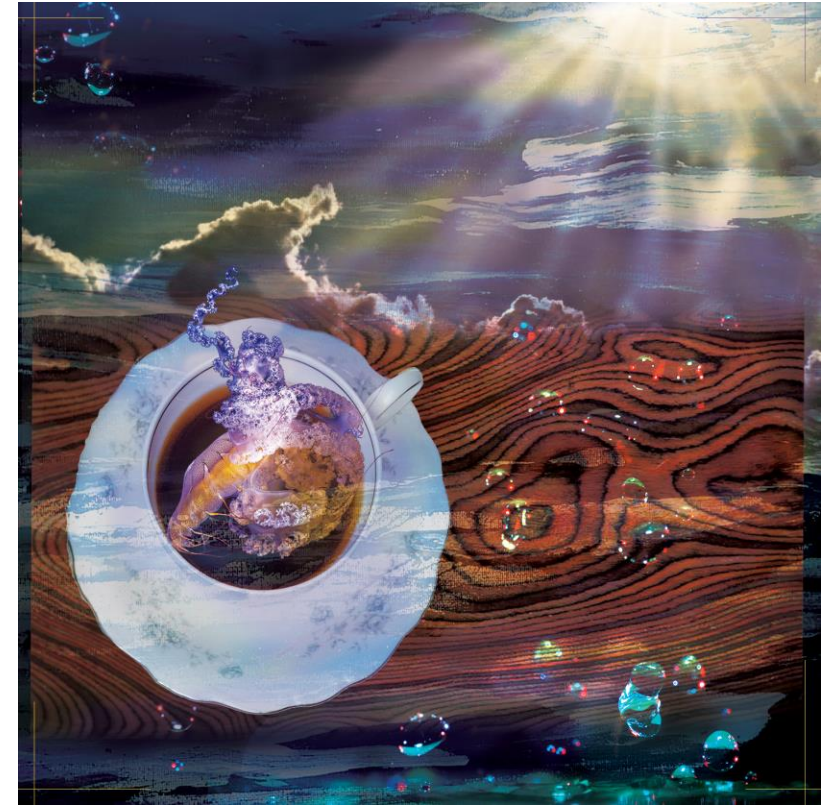

# Process pictures

# Final Product

# Artist Statement

This project is themed around my mind, body, and spirit. Each individual word represented in a photoshop collage using images found on the internet that I think represents each part of myself.

During the brainstorming phase, I stumbled upon these pictures of wood, and this allowed me to produce the idea of each collage being the desk of each part of myself. Mind is technical represented by the grid, books, and spiderweb, but addressing the freeform thinking part with the mushrooms and butterflies. The magazine letters are the literal form of scatterbrained. Body is very literal with the bloody red fruit showing physical flesh but femininity. Spirit is free and bubbly. For this part of the project, I focused less of symbolism and more of the vibes it produced.

This collage triptych created represents my whole being through showcasing mind, body, and spirit.

# Reflection

I have a couple years experience in photoshop but have not used it in a while. I was rusty to say the least. I missed it. I like having work that is connected like this although I don't do it very often. Maybe with my personal work, I will apply some theming like this. I had some trouble with my personal laptop when it came to running photoshop, so Skylab was my new favorite place.
